Tianjin TEDA Biomedical Engineering Company Limited

(a joint stock company incorporated in the People's Republic of China with limited liability)

(Stock Code: 8189)

THIRD QUARTERLY REPORT FOR 2011

CHARACTERISTICS OF THE GROWTH ENTERPRISE MARKET (“GEM”) OF THE STOCK EXCHANGE OF HONG KONG LIMITED (THE “EXCHANGE”)

GEM has been positioned as a market designed to accommodate companies to which a higher investment risk may be attached than other companies listed on the Exchange. Prospective investors should be aware of the potential risks of investing in such companies and should make the decision to invest only after due and careful consideration. The greater risk profile and other characteristics of GEM mean that it is a market more suited to professional and other sophisticated investors.

Given the emerging nature of companies listed on GEM, there is a risk that securities traded on GEM may be more susceptible to high market volatility than securities traded on the Main Board and no assurance is given that there will be a liquid market in the securities traded on GEM.

Hong Kong Exchanges and Clearing Limited and The Stock Exchange of Hong Kong Limited take no responsibility for the contents of this document, make no representation as to its accuracy or completeness and expressly disclaim any liability whatsoever for any loss howsoever arising from or in reliance upon the whole or any part of the contents of this document.

This report, for which the directors of Tianjin TEDA Biomedical Engineering Company Limited collectively and individually accept full responsibility, includes particulars given in compliance with the Rules Governing the Listing of Securities on the Growth Enterprise Market of The Stock Exchange of Hong Kong Limited for the purpose of giving information with regard to Tianjin TEDA Biomedical Engineering Company Limited. The directors, having made all reasonable enquiries, confirm that, to the best of their knowledge and belief:

- 1. the information contained in this report is accurate and complete in all material respects and not misleading;*
- 2. there are no other matters the omission of which would make any statement in this report misleading; and*
- 3. all opinions expressed in this report have been arrived at after due and careful consideration and are founded on bases and assumptions that are fair and reasonable.*

Notes:

1. BASIS OF PRESENTATION

The financial statements have been prepared on a going concern basis, assuming that the Group will continue to operate as a going concern, notwithstanding the fact that the Group suffered accumulated losses of RMB73,242,336 as at 30 September 2011. The validity of the Group's ability to continue as a going concern depends on the success of the Group's future operations and the ability of the Group to renew or replace the banking facilities as they fall due. Consequently, the directors have prepared the unaudited quarterly results for the nine months ended 30 September 2011 on the going concern basis.

The financial statements have been prepared under the historical cost convention and in accordance with Hong Kong Financial Reporting Standards, accounting principles generally accepted in Hong Kong, the disclosure requirements of the Hong Kong Companies Ordinance and the Rules Governing the Listing of Securities on the GEM of the Stock Exchange (the "GEM Listing Rules"). The principal accounting policies adopted are consistent with those used in the preparation of the Group's annual financial statements for the year ended 31 December 2010.

2. TURNOVER

The Group's turnover is derived principally from the sales of fertilizer products and medical and health products.

An analysis of the Group's turnover by segments is as follows:

	For the nine months ended 30 September		For the three months ended 30 September	
	2011 RMB	2010 RMB	2011 RMB	2010 RMB

MANAGEMENT DISCUSSION AND ANALYSIS

Business Review

For the nine months ended 30 September 2011, the Group was principally engaged in (1) biological compound fertilizer products; and (2) medical and health products, including series of diabetic health products and sugar-free products which are beneficial to the health of human body.

Since the beginning of 2011, though the global economy has been recovering, the growth has slowed down especially in developed countries. Following the lowering of the US sovereign credit rating, the spreading of European sovereign debt crisis created numerous uncertainties to the world's economic development. As prices of various commodities such as international agricultural products and energy rose rapidly and over-quantitative monetary policy continuously accelerated the domestic inflation, CPI remained at a high level.

Facing such an adverse domestic economic condition, the Group actively endeavored to overcome all difficulties and its operating results have been significantly improved when compared to the corresponding period of last year. For the nine months ended 30 September 2011, the turnover of the Group amounted to RMB425,044,315, up 29.89% as compared to the corresponding period of last year, while the turnover of the Group for the three months ended 30 September 2011 was RMB171,054,978, up 24.45% as compared to the corresponding period of last year. For the nine months ended 30 September 2011, the consolidated gross profit margin of the Group increased from 17.18% for the corresponding period of last year to 18.49%, and the gross profit of the Group rose to RMB78,602,935, representing an increase of 39.80% as compared to the corresponding period of last year. During the period under review, profit attributable to the owners of the Company was RMB7,569,907 (30 September 2010: RMB3,389,685), representing an increase of 123.32% as compared to the corresponding period of last year. Earnings per share of the Company was RMB0.53 cents (30 September 2010: RMB0.24 cents).

For the nine months ended 30 September 2011, approximately 81.83% of the total turnover was generated from the sales of biological compound fertilizer products while the sales of the medical and health products accounted for the rest.

Compound Fertilizer Products

Extreme weather took place recurrently in China this year. Low rainfall in northern winter wheat region and middle and lower parts of Yangtze River throughout most of the first half of the year caused a severe drought. Upon the commencement of flood season, higher rainfall was recorded in several regions such as Jiangxi, Hunan, Guangdong and Guangxi, making a sudden turn from drought to floods in the middle and lower parts of Yangtze River. In autumn, a number of streams from Yangtze River and Yellow River overflowed heavily, causing severe floods in Sichuan, Shaanxi, Henan, Chongqing, Hubei, Shandong, Shanxi, Gansu and Qinghai. Unfavorable agricultural climate has brought certain negative impacts to the chemical fertilizer market. Furthermore, prices of raw materials of compound fertilizer climbed persistently under the influence of surging international food price and oil price this year, exerting pressure on the production costs of compound fertilizers enterprises.

Against such various adverse factors in the chemical fertilizer market, the Group endeavored to adjust its sales strategies and expand its market share. For the nine months ended 30 September 2011, the sales of the Group's biological compound fertilizer products amounted to RMB347,830,399, up 33.40% as compared to the corresponding period of last year; while the sales of the Group's biological compound fertilizer products amounted to RMB140,714,717 for the three months ended 30 September 2011, up 26.98% as compared to the corresponding period of last year. For the nine months ended 30 September 2011, the gross profit margin of the Group's biological compound fertilizer products increased from that of the corresponding period of last year of 10.71% to 12.98%. Gross profit increased 61.65% to RMB45,145,718 as compared to the corresponding period of last year.

Medical and Health Products

For the nine months ended 30 September 2011, the sales of the Group's medical and health products was RMB77,213,916, representing an increase of approximately 16.18% as compared to the corresponding period of last year. For the three months ended 30 September 2011, the sales of the Group's medical and health products was RMB30,340,261, representing an increase of approximately 13.93% as compared to the corresponding period of last year. The gross profit margin of the Group's medical and health products for the nine months ended 30 September 2011 was 43.33% (30 September 2010: 43.81%), representing a slightly decrease as compared to the corresponding period of last year, which was attributable to an increase in the production costs arose from price rises of raw materials.

Distribution and Selling

For the nine months ended 30 September 2011, given that the Group's overall realized turnover significantly increased 29.89% as compared to the corresponding period of last year, the Group's distribution and selling expenses slightly increased 1.30% to approximately RMB29,805,966 (30 September 2010: RMB29,422,834) as compared to the corresponding period of last year. During the period under review, the Group endeavored to adjust its sales strategies and committed to expand its market share while reasonably controlled relevant costs.

Research and Development and Administration

For the nine months ended 30 September 2011, R&D and administration expenses of the Group were approximately RMB32,188,315 (30 September 2010: approximately RMB27,864,695), representing an increase of 15.52% as compared to the corresponding period of last year. During the period under review, given that the Group's overall realized turnover significantly increased 29.89% as compared to the corresponding period of last year, the ratio of R&D and administration costs to prevailing turnover decreased to 7.57% (30 September 2010: 8.51%), the Group controlled R&D and administration expenses reasonably.

The total number of the employees of the Group decreased from 753 as at 30 September 2010 to 708 as at 30 September 2011, which was a normal employee turnover.

Future Outlook

This year, the PRC's overall economic development was satisfactory and developed in a way heading to austerity measure. Currently, global food demand and supply remain balanced. Factors like increased costs, abnormal climate and reducing arable area resulted in rises of food prices. As an essential agriculture related industry, there is no doubt that chemical fertilizer industry was materially affected by the international food prices and the PRC government's policies on agriculture, rural areas and farmers. According to No.1 Document 2011 issued by the PRC central government, the PRC government still focuses on the issue of agriculture, rural areas and farmers. The PRC government will substantially increase the investment in construction of infrastructure facilities in the rural areas, especially emphasizing on water conservancy infrastructure facilities. This would undoubtedly set up a key foundation for a stable chemical fertilizer market. Currently, prices of resources required in chemical fertilizer production remain high. Increasing costs and selling prices also increased the operational risk of the enterprises in the meanwhile. Under global inflation, chemical fertilizer market will be hovered at high level in the second half of 2011. The Group will adopt an aggressive and reliable sales strategy to strive for the market share expansion and consolidate the sales channels and development, so as to establish a solid foundation for the brisk sales of chemical fertilizer in the next spring.

Medical and health products of the Group mainly include diabetic food products for controlling blood sugar level and sugar-free products which are beneficial to human body. According to the latest data of 2010, the number of diabetics in China reached 92,400,000 and the lowering trend of patients' age sustained. As China has become a country with the largest population of diabetics, morbidity of adults in major and second tier cities reached 9.7% after age standardization adjustment. Hence, the future of the sugar-free products market is promising. Strictly speaking, sugar-free products industry in China should be divided into two segments: diabetic food products for controlling blood sugar level and general sugar-free products. With the number of diabetics soars in China and increasing demand for health product from public, sugar-free products industry will develop rapidly.

Looking forward to the development trend of the Group in the fourth quarter of this year and throughout 2011, the board believes that the annual operating results are expected to be notably improved as compared to 2010.
